PROFESSIONAL SUMMARY

Results-driven Software Engineer with 4+ years of experience designing, building, and maintaining large-scale, mission-critical enterprise applications in Java. Currently delivering core post-trade clearing technology for Morgan Stanley at PwC, supporting trade processing across 35+ global markets. Strong command of the full software development lifecycle, cloud migration, observability, message-driven architecture, and financial regulatory implementation. Skilled at translating complex business requirements into robust, scalable solutions while collaborating directly with global business stakeholders in a fast-paced Agile environment.

TECHNICAL SKILLS

Languages: Java (JDK 8–21), Python, JavaScript, SQL, HTML/CSS

Frameworks: Spring Boot, Spring MVC, Hibernate / JPA, Thymeleaf, Bootstrap

Databases: PostgreSQL, Oracle, MySQL

Cloud & DevOps: Microsoft Azure (AKS, VMs, VMSS, Key Vault, App Service, Functions, Storage), AWS (EC2, S3, Lambda, DynamoDB, ELB, ASG), Docker, Azure DevOps, Snowflake

Observability & Messaging: OpenTelemetry, Grafana, Message Queues, Event-Driven Processing

Tools & Practices: Git, GitHub, Maven, Jira, Veracode, CI/CD, SAST / SCA, Change Management (TCM), Agile / Kanban

Operating Systems: Linux (RedHat, Ubuntu, Rocky), Windows, macOS

PROFESSIONAL EXPERIENCE

Senior Associate – Software Engineer

Apr 2025 – Present

PwC India | Client: Morgan Stanley

Bangalore, India

Application: MARS (Matching, Allocation and Registration System) — post-trade clearing platform processing trades across 35+ global markets.

- Develop and enhance core trade-clearing functionality as a Java developer on MARS, delivering 20+ JIRA work items covering new features, defect fixes, and production patches under a Kanban delivery model.
- Led the onboarding of new markets onto the platform, expanding clearing coverage while ensuring conformance to market-specific rules and workflows.
- Implemented SEBI regulatory requirements for the India market, including option premium regulatory changes, ensuring full compliance with capital-markets regulations.
- Engineered application observability by integrating OpenTelemetry to export telemetry to Grafana and building Grafana dashboards for real-time monitoring of system health and trade flow.
- Designed and optimized queue-based message processing to reliably handle high-volume trade data.
- Automated key operational tasks in Python — including end-of-day (EOD) reporting emails and real-time margin-discrepancy alerts — reducing manual effort and accelerating issue response.
- Migrated application source control from Bitbucket (Stash) to GitHub and upgraded the codebase from JDK 8 to JDK 21, modernizing the technology stack and improving maintainability.
- Owned the complete development lifecycle on the client site: requirement analysis, design, coding, dev testing, QA testing, test-evidence collection, and production deployment.
- Managed change governance by scheduling TCM (Technical Change Management) turnovers, executing changes, and validating them post-deployment.
- Partnered directly with business users to gather requirements, deliver feature demos, secure user sign-offs, and resolve production issues — consistently maintaining high stakeholder satisfaction.
- Mentored and supported teammates in resolving technical issues, strengthening overall team delivery.

Software Engineer

Oct 2021 – Apr 2025

Tech Mahindra | Client: AT&T Services Inc.

Bangalore, India

- Orchestrated the migration and seamless integration of time-reporting screens used by a workforce of 60,000+ field technicians into the Infor system.
- Designed, coded, and tested core features of a web-based Java application critical to the daily operations of 60,000+ technicians managing DSL / POTS / U-Verse services across the United States.
- Migrated a Java application from on-premises infrastructure to Microsoft Azure, including a database migration from Oracle to PostgreSQL and SQL query optimization that improved overall system performance.
- Performed golden-image upgrades of virtual machines and Azure Kubernetes Service (AKS) clusters, identifying and remediating security vulnerabilities.
- Implemented OpenID Connect and role-based authentication using Java and JavaScript, integrating Azure Key Vault across Java and Python applications.
- Managed SSL certificates and conducted SAST and SCA scanning to address application and infrastructure security vulnerabilities.
- Developed Python cron jobs for automated file processing and integrated SMTP mail services into Python scripts.
- Produced comprehensive reports to communicate complex technical information to business clients.

EDUCATION

Master of Software Engineering

2024 – 2026

Birla Institute of Technology

Bachelor of Engineering – Aeronautical Engineering

2015 – 2019

Shree Devi Institute of Technology

CERTIFICATIONS

- Microsoft Certified: Azure Data Scientist Associate (DP-100) — Dec 2024
- AWS Certified Cloud Practitioner — Dec 2023
- Microsoft Certified: Azure Data Fundamentals (DP-900) — May 2022
- Microsoft Certified: Azure Fundamentals (AZ-900) — May 2022
- Cisco Certified Network Associate (CCNA) — Jul 2021

AWARDS & RECOGNITION

- Bravo Award, Tech Mahindra (Jul 2024) • AQT Ninja, Tech Mahindra (Jan 2023) • Best Team, Tech Mahindra (Dec 2022) • Pat on the Back, Tech Mahindra (Sep 2022) • Spotted, Tech Mahindra (Apr 2022)
